

## MONTHLY WEATHER REVIEW - ARMIDALE NSW DECEMBER 2016

December 2016 was an unusually warm cloudy month with high thunderstorm activity. Rainfall was a little below the average at 89.1 millimetres with almost half of it (39.6 mm) falling in one afternoon during thunderstorms on the 23rd. The remainder of the falls were mostly light. Temperatures were much higher than normal with maximums averaging at their highest for the month of December since 1990 with 30 degrees reached or exceeded on nine days. The unusually warm conditions were caused by a number of troughs drawing in very warm air from the centre of Australia. Thunderstorm activity was higher than normal with storms on ten days, and hail on one day - the 23rd. Winds were predominantly light to moderate westerlies.

### **Noteworthy events:**

23rd - A series of thunderstorms built up over the Armidale area in the afternoon with a number of heavy falls of rain and small hailstones from 3.30 to 5.00pm. The storms dropped 39.6 mm of rain in Armidale city and 57.0 mm at the airport where wind gusts of 96 kms per hour were recorded between 3.53 and 4.00pm. The deluge caused moderate flooding in Dumaresq Creek which closed all low level causeways in the city.

### **DECEMBER 2016 STATISTICS** (long term averages in brackets)
